Module installation

- 1) Upload and install the module via your back-office as usual.
- 2) In the module's configuration screen, enter the URL of your Facebook Fan Page
- 3) Set your preferences for the vouchers the module will generate: choose between percentage or amount, and enter the corresponding value. You can also set a minimum purchase amount.
- 4) For the voucher validity, the number you enter here is in hours. So, for 30 days, enter 720 (30 days x 24 hours).
- 5) For FB app Id, if you have already created a Facebook app for another module or any reason and that is linked to this domain, you can fill out your FB app ID. To create a Facebook app, follow this link: <http://faq.businesstech.fr/faq.php?id=71&lg=en>
- 6) Select your hooks in order to display like button's bloc.
- 7) Update the settings.

That's it !

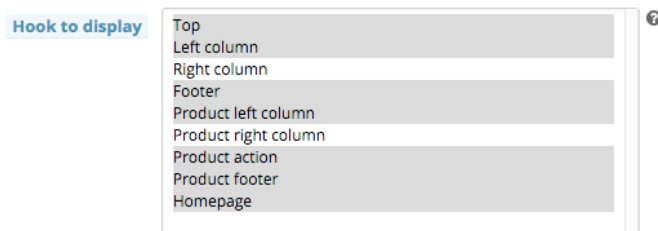

Business Tech Installation Service

If you need help installing and configuring your module, we can offer you an installation service, which can be purchased on our modules online shop

Module configuration

When you install the module, it will be displayed in many places in advance parameters you can select hook to display the module :

Hook management

The screenshot shows a dropdown menu titled "Hook to display" with a list of available hooks. The hooks are: Top, Left column, Right column, Footer, Product left column, Product right column, Product action, Product footer, and Homepage. The "Right column" option is highlighted in blue.

“Shopping Cart summary” hook is installed and activated by default, you can change it by manually hooking or unhooking the module. To do that, go to Modules -> Positions.

In advance parameters you can activate or not the popup windows.

Popup management

Activate popup window :

YES

NO

Testing the module

WARNING: You CANNOT test the module on a “local” test server with a URL like <http://localhost>. This is because Facebook does not accept “localhost” in the Like button.

You can of course test on a development server, but the URL will need to be a fully qualified one such as <http://test.myshop.com>
